## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement filed February 25, 2004 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered.

Only the abstract of Japan reference 6-196724 was found in the file.

### ***Drawings***

Figure 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Takayama (US Patent No. 5,483,209).

Claim 1:

Takayama (prior art – Fig. 4) shows a high frequency switch comprising an input terminal (1) an output terminal (output), a first diode (sd5) provided in a signal line which connects the input terminal to the output terminal, the first diode having input and output ends; a second diode (sd2) having one end which is connected to the input end of the first diode; a first resistor (unlabeled shunt resistor to ground between input (1) and sd2) provided in a terminated line which is connected to another end of the second diode; a third diode (pd) having one end which is connected of the output end side of the first diode; and a second resistor provided in a terminated line which is connected to another end of the third diode (shunt resistor to ground between pd and output).

### ***Allowable Subject Matter***

Claims 3 and 4 are allowed.

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Cayrou et al. – shows a switch matrix.

Miya – shows a switch with resonance circuits.

Nakatuka – shows a switch attenuator.

Nelson – shows a diode switch.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dean O. Takaoka whose telephone number is (571) 272-1772. The examiner can normally be reached on 8:30a - 5:00p Mon - Fri.
